

THE ANGULAR FRAMEWORK

- derived from Angular.JS
 - ↳ relatively light-weight JS framework used "components"/"modules" to group functionality
- now managed by Google
- a SPA = single-page application
 - ↳ only one HTML page (index.html)
 - ↳ content is loaded onto that page via router/
Components

COMPONENT - self-contained unit

- comprised of its own HTML, CSS, TS, testing

APP

IMPORTANT - each component is ONLY aware of its own data - components do NOT have access to TS variables in other components

Angular uses TS, not JavaScript

2. Child → Parent
(event listeners)

3. Unrelated → Unrelated
(service)

OKAY

1. Parent → Child
(property binding)
